Yarn

Maris Spinners Limited, , specializing in manufacture of high-quality cotton yarn. With a spindle capacity of 49536 at both the units in Karnataka and Tamilnadu, we operate spinning facilities that meet the highest standards demanded by our clients.

Our advanced spinning technology, stringent quality controls, and unwavering commitment to innovation form the backbone of our value chain and drive our continued excellence in the textile industry.

Sustainability

Sustainability is at the heart of our operations. We have made significant investments in clean energy infrastructure, including 2.1 MW of wind power and 2 MW of solar power, meeting 15% of our total power requirements through renewable sources.

We utilize rainwater harvesting and groundwater recharge systems, ensuring sustainable water use across our facilities.

Training - Unit 1 Mysore

The company offers continuous on the job and off the job training for everyone in the organization. A lot of time is also dedicated for training the new recruits. Maris Spinners has in house training facilities, with a specialized team to train the workers on modern work methods. External agencies are also regularly used for motivational training. There is also a special focus given to health and safety training

Training - Unit 2 Trichy

The Entire work force are trained by a separate training department comprising a dedicated team, functioning independently that involves in recruitment of people, adopting scientific method and also monitoring the system of work practices on a continuous basis.

Training is considered to be our biggest strength in ensuring the good work practices, team work, motivating the people at all levels to achieve the desired results.
